

LONGWORTH

component cleaning specialists

INTRODUCING DEECOM[®] STEAM CLEANING

DEECOM[®] is Longworth's patented filter cleaning system. It uses a combination of superheated steam compression / decompression cycles to gently remove a range of polymers from filters and related production equipment.

Accreditations
BS EN ISO 9001:2008

Available to purchase in capacity sizes ranging from 20 litres to 3,500 litres, there is a DEECOM® system available for a range of business sizes and budgets. Alternatively, we offer a comprehensive DEECOM® cleaning service which we can carry out on your behalf.

Benefits

- Improved cleaning capability from use of superheated steam
- Removal of all traditional solvents such as TEG and DEG
- Reduced number of cleaning stages means lower energy usage and lower cost of ownership
- Proven to be environmentally friendly
- No solvents used, therefore no solvent to dispose of
 - Easy-to-use and operate
 - Reclamation of old filters by gently removing ingrained and embedded contamination
